

Do you take amazing underwater photos? **We want you!**

The Great Barrier Reef is too big for any one group to monitor on its own which is why we need your help! Virtual Reef Diver is a research project designed to tap into the power of citizen science to dramatically increase the amount of monitoring images and data from the Great Barrier Reef.

The project is launching its 'upload' feature from 5 December 2018 and we want your Great Barrier Reef photos. Submit your photos (360 degree images welcome too) of the reef for citizen scientists to review. Help us monitor coral cover and ensure the Great Barrier Reef's future! Visit our website and upload your photos today.
